IRUMBAI TEMPLE as YANTRAM

Timeless union of physical and subtle planes

a lecture by Christoph Kluetsch Veedushi Malik and Kalaivani

Tuesday 5th November 2024 at 5pm

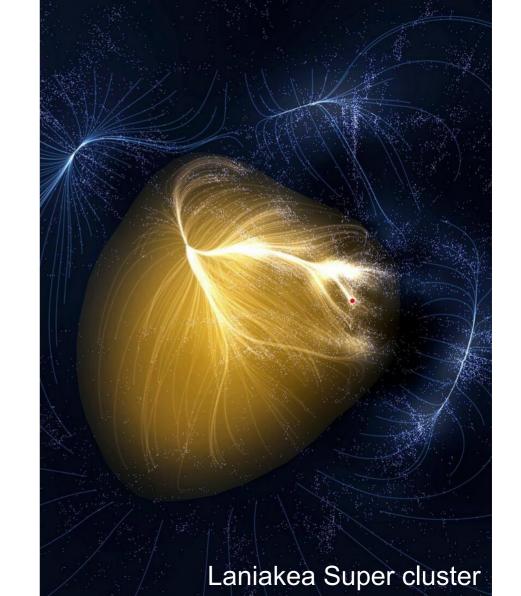

Second of a series of lectures to explore connections between art, philosophy, and spirituality, bridging Eastern and Western traditions to illuminate the enduring questions of existence, consciousness, and creativity.

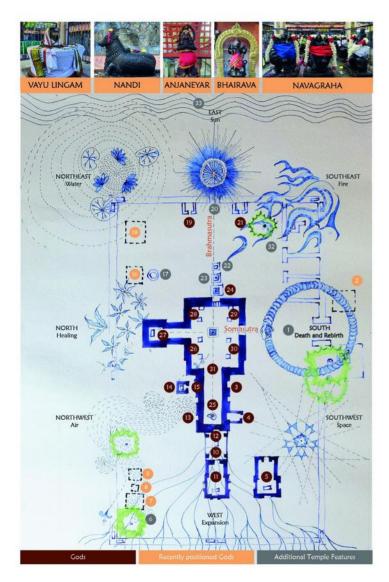

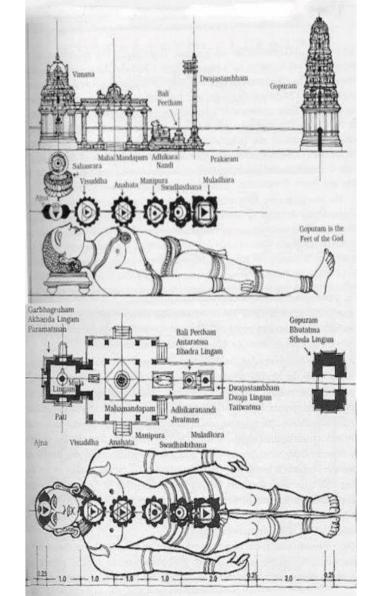

Multimedia Room / Centre d'Art, Auroville

Purusha

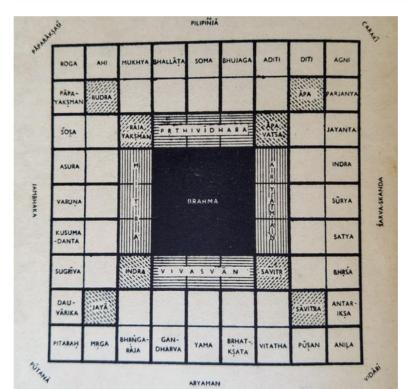

In Hindu temple architecture, the concept of Purusha is integral to the design and spiritual significance of the structure. Purusha, the cosmic being, represents the universal spirit that permeates and sustains the universe. This concept is embodied in the Vastupurushamandala, a sacred geometric diagram that serves as the blueprint for temple construction. The Vastupurushamandala envisions Purusha lying with his head at the Garbhagriha, or sanctum sanctorum, which includes the Sahasrara chakra, symbolizing the highest point of spiritual consciousness.

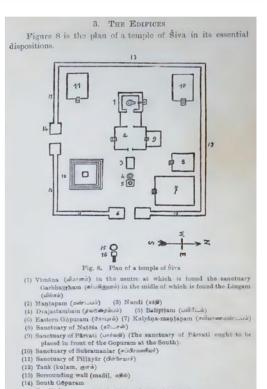

The throat chakra aligns with the Ardha Mandapa, the heart chakra with the main Mandapa, manipuraha with Nandi, Svadishtana with Bali peedam/ kodi maram and mooladara with Kodi maram/ Bali peedam, the feet with the Gopuram, the grand entrance tower. This alignment ensures that the temple is not only a physical structure but also a spiritual microcosm of the human body and the cosmos. The arrangement of the temple's components, guided by the Vastupurushamandala, reflects the journey through the chakras, from the material to the divine, facilitating a profound spiritual experience for the devotee and embodying the ancient Indian ethos of unity between the cosmic and the divine.

13.0 9.0

The temple as apparatus

- Vastupurushamandala
- Sacred geometry, iconometry
- Orientation and layout
- Chacras / Purusha

Subtle plane

Bindu (Pradakshina)

Bindu as the Source of Cosmic Energy

- Represents the origin of cosmic and creative energy, symbolizing the universe's beginning
- Acts as a spiritual axis, linking earthly existence with the cosmos and guiding the devotee's path toward the divine

Garbhagriha (Inner Sanctuary) and the Bindu

- Bindu in Garbhagriha is the central energy point, focusing spiritual practices and meditations.
- This houses the main deity.

Temple Location and Energetic Alignment

- Chosen by the sacred energy field of the specific spot is the place for a temple. The space is further charged by the ideas and practices it accommodates.
- The subtle meanings-symbols and energies communicate to the subjective inqueries of individuals.

Yantra and Mantra as Energy Amplifiers

- Yantra: The tool/vehicle to enshrine divinity. Usually in the form of geometric pattern around a central bindu.
- Mantra: Sacred sounds inscribed and chanted, creating sound vibrations that harmonize the environment and amplify spiritual energy, aiding meditation and worship.

The Essence of Pradakshina (in Chola Temples)

In Chola temples, *Pradakshina* goes beyond a mere ritual; it is an embodied spiritual journey harmonized with the temple's architectural. Each circumambulation, whether performed by a single devotee or a group, forms a bridge between the divine and human realms, making the temple a microcosm of the cosmos itself. The act of *Pradakshina*, therefore, becomes a personal pilgrimage, a moment of inner alignment, and a journey toward spiritual transcendence.

History

Sri Mahakaleswarar Temple at Irumbai Mahalam

Mahalam (Time) Kaleshwa

Reenergizing the temple (21st century)

Siddhar timeline (500 years???) – dry period

Chola period (12th century) – fertile period

Vastupurushamandala

Tevaram (8th century) songs – refrencing mulai land forest Sangam (fertile)

Dancing Shiva(Nataraja), Shakti(Sivagami)

Bakhti Saints (Sambandar, Navukarasar, Sundarar, Manikavasagar)

Texts Influencing the Architecture of the Irumbai Temple

Philosophical Foundations

- Rooted in ancient texts: Vedas and Upanishads (1500-500 BCE)
- Vedas: Core hymns and rituals shaping Hindu practices (Rigveda, Samaveda, Yajurveda, Atharvaveda)
- Upanishads: Philosophical insights into reality and self, establishing divine-earthly connections

Integration of Mythology and Practicality

- Puranas (300-1500 CE): Mythological narratives and deity guidelines for temple architecture
- Vishnudharmottara Purana and others guide the reflection of cosmic principles in temple design

Detailed Construction Guidelines

 Agamas and Tantras (500-1500 CE): Specific procedures for temple construction in Shaivism, Vaishnavism, Shaktism Emphasis on spiritual rituals and consecration of sacred spaces

Vastu Shastra: Architectural Science

- Compiled between 600 BCE and 600 CE
- Vastupurushamandala: Sacred cosmic diagram aligning layout with cosmic/natural orders
 Ensures temple as a microcosm of the universe, attributed to divine architect Vishvakarman

Classical Texts on Temple Architecture

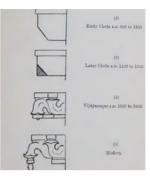

• Brihat Samhita (6th century CE), Samarangana Sutradhara (11th century CE), Mayamata, and Manasara (5th-8th centuries CE)

Offer principles on deity placement, layout, symbolism Blend spiritual, cosmological, and practical elements in architecture It is said that the temple was build under Chola King Kulothungan III 1178-1218. This is the time of the already declining Chola empire. It is associated with the legend of Kaduveli Siddhar, which is difficult to date. The temple is mentioned in one of the songs of Sambandar who was born in the 6th-7th century. His works are part of the Tevaram

We began our analysis with the southern facade of the Vimana, sketching a preliminary drawing to understand its architectural elements. The Vimana base, i.e. the outside of the Garbhagriha splits into two interlinked sections, each based on a socket.

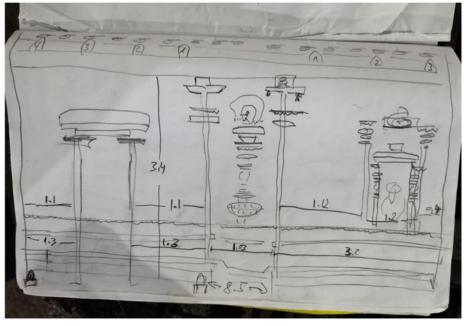

These sections represent different time periods. The left side shows Chola style bulbous capitals, while the right has Vijayanagar style. Similarly, the corbels are distinct; the left is from the later Chola period (1100-1350), and the right from the Vijayanagar era (1350-1600), as per G. Jouveau Dubreuil's "Dravidian Architecture" (1917).

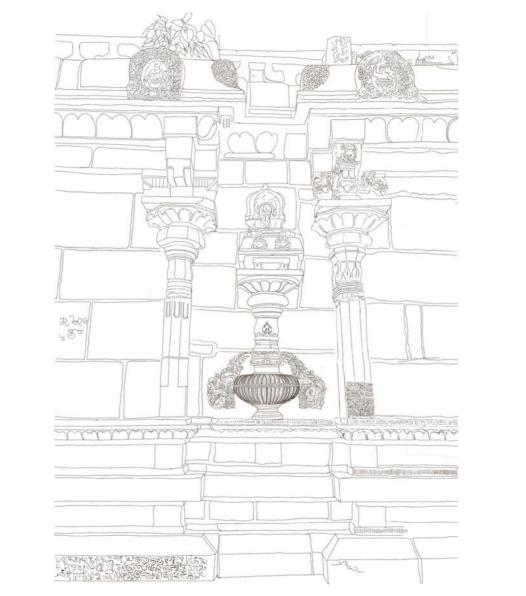

Dimension-wise, the first three column segments are evenly spaced at 1.1, 1.1, and 1.12 meters. The fourth is only 0.4 meters from the Snapana Mandapa's extension, with 0.7 meters obscured. The Snapana Mandapa's corbels, in late Chola style, don't align with the temple's chronological construction, suggesting material repurposing during renovations.

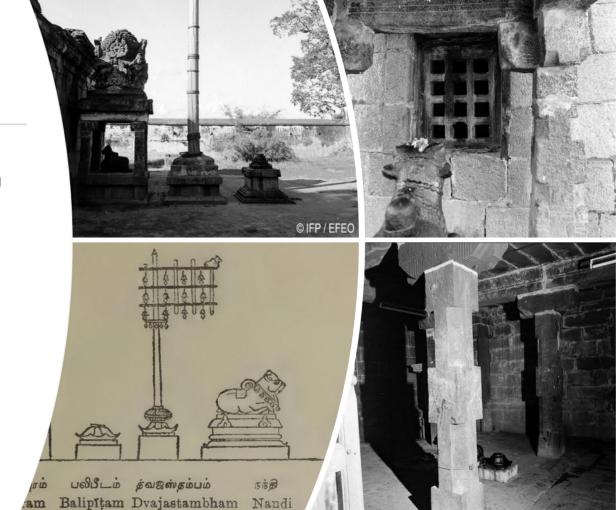

Practice

The closed east entrance before renovation

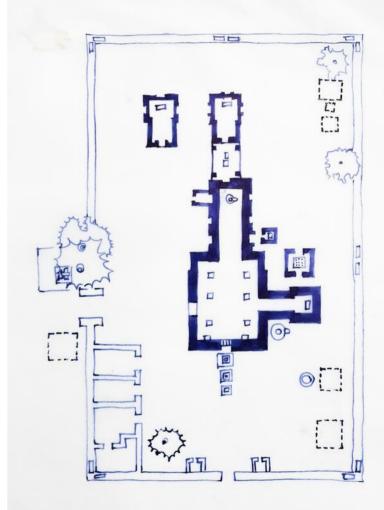

Why was the east entrance closed like in other temples from this time and area?
